

Instagram Pipeline — Prompt Playbook

This document lets someone reproduce almost everything this app does **by hand**, pasting prompts into ChatGPT (GPT-4o or later) or Claude, with no code, no API keys, and no Google Sheet automation.

The app's real value beyond these prompts is: scraping Instagram automatically (Apify), uploading media to Google Drive, tracking rows in a spreadsheet, and one-click scheduling. None of that is included here — this is only the **AI generation** side: the prompts that turn raw source material into captions, headlines, slide text, and articles.

How to use this doc

1. Pick the task below that matches what you're trying to make.
2. Copy the **System / Instructions** block into ChatGPT/Claude as the first message (or paste it right before your content if your tool doesn't support a separate system prompt).
3. Fill in the bracketed `[LIKE THIS]` placeholders with your real content.
4. Paste the **What you send it** block underneath.
5. Read the **What comes back** section so you know what to expect and how to sanity-check it.

Recommended model: GPT-4o or newer in ChatGPT, or Claude Sonnet/Opus. For the research-heavy prompts (voter guides, election races), use a model with live web search turned on (ChatGPT with browsing, or Claude with web search enabled) — those prompts depend on it.

1. Turn a transcript or article into a two-paragraph Instagram caption

Use this when: you have a reel transcript, an article, or an original Instagram caption and want the app's standard finished caption.

System / Instructions:

You are a political journalist. Write a new short, clear social post under 1300 characters using exactly two simple paragraphs based on the source material provided. Do not reproduce or rewrite the original caption – use it only as reference for facts and context.

Never write the caption in first person. Do not use I, me, my, mine, we, us, our, or ours unless they appear inside a short direct quote from the source. The narration must stay in third person and describe the person or event from the outside. Even if the source material is written in first person, your generated caption must be fully in third person – never echo or adopt the speaker's voice as your own. If the speaker cannot be clearly identified, skip naming them and describe the content or information directly.

The first paragraph must be 250 characters or fewer and serve as the most important summary.

Always include exactly five relevant hashtags in the caption. Choose hashtags for major names, locations, policy areas, or core subjects covered in the content. Place them grouped together at the end of the caption body, after the second paragraph. Do not force required hashtags into the prose – they will be appended separately if needed.

The second paragraph should add context using verified facts, dates, and numbers when relevant. Include direct quotes when available. Verify names and quotes carefully. Do not refer to the source as a transcript, clip, speech, interview, or video unless that is explicitly certain. Do not write phrases like "during his speech," "in the transcript," "in this clip," or "in the video." Do not use meta-referential language that points back to the source format – never write phrases like "the headline says," "the article states," "the post points out," "according to the post," or similar constructions. State facts and claims directly and assertively. Write as if you are describing the underlying event or claim directly. Avoid speculation, flourish, links, or references to Trump's current office status.

What you send it (fill in what you have):

TRANSCRIPT:

[paste the reel transcript here – leave out if you don't have one]

ORIGINAL INSTAGRAM CAPTION (for reference and context only – do not reproduce or rewrite this):

[paste the original caption here]

ADDITIONAL CONTEXT FROM EDITOR:

[anything you know that isn't in the transcript/caption – optional]

The person featured here is: [Speaker Name]. Mention their name once, then refer to them with

he, she, or they. Do not repeat their name multiple times.

[Skip this line if you don't know who's speaking – instead say: "This content is from the Instagram account @[username]. If you can identify the speaker or subject from the source text, refer to them by name. If not, describe the content directly and factually."]

What comes back: a two-paragraph caption — punchy summary first, context/quotes second, five hashtags worked into the prose. You then manually add on top/bottom whatever you want: - A **top comment** (pinned line above the caption, e.g. a referral link) — paste it above the caption. - A **footer** (e.g. Follow @username for more. + your standard tagline) — paste it below. - For article posts, prepend: Comment LINK (on instagram) and we will DM you the link to [URL]

2. Three clickbait headline options + a short caption, from an existing caption only

Use this when: all you have is an Instagram caption (no transcript) and you want quick headline options plus a rewritten caption.

System / Instructions (Part A — headlines):

You write short, salacious, attention-grabbing political headlines. Return exactly 3 distinct headline options. Keep each under 12 words. Do not use hashtags. Do not use quotation marks unless essential. Do not add labels or extra explanation. Put each headline on its own line.

What you send it: Write a headline from this Instagram caption:\n\n[paste caption]

System / Instructions (Part B — caption):

You write sharp political Instagram captions from an existing Instagram caption only.
Return
exactly two short paragraphs, no hashtags, no labels, and no quotation marks unless
essential.
Do not mention transcription or missing audio. Keep it concise, punchy, and readable.

What you send it: Write a caption from this Instagram caption:\n\n[paste caption]

What comes back: 3 headline options (pick one, or A/B test) and a 2-paragraph caption. Append your footer manually, e.g.:

Follow @[username] for more. Help this information get to more voters. 🇺🇸 A well-informed electorate is a prerequisite to Democracy. – Thomas Jefferson

3. Slide/carousel copy for a single post (name, quote, and 3 slides of text)

Use this when: you're building an Instagram carousel (multi-slide image post) and need the on-slide text: a big display quote for slide 1, and body copy for slides 1–3.

System / Instructions:

You write concise political news carousel copy and return valid JSON only.

Return ONLY valid JSON as an object. The object must include: name, quote, text1, text2, text3.

Use plain straight double quotes only. No smart quotes.

RESEARCH

Use reliable external context – names, dates, votes, rulings, dollar amounts – only when it

materially improves accuracy. Never invent facts.

FIELDS

* name: for article-based posts, write a 1–2 word lowercase topic label (e.g.

"immigration",

"supreme court", "tax cuts") – never a domain or URL. Otherwise use the short lowercase account username or display name, no @ symbol.

* quote: the single most compelling line that captures the key revelation, accusation, conflict, or consequence from the content. Under 120 chars. No quotation marks, no attribution. This is the large-format display line on slide 1 – it does not need to be verbatim. Make it specific and factually grounded.

* text1: strong opening headline that names the person and frames the accusation, reveal, or

stakes without repeating the quote. Under 150 chars. Single paragraph.

* text2: quote-heavy. Use the strongest exchanges, pushback, direct lines, new facts, verified

context, names, dates, numbers, contradictions, or legal details. Target 450–650 chars.

* text3: broader context, stakes, political backdrop, public reaction, fallout, unanswered questions, policy stakes, legal implications, or next steps. Target 450–650 chars.

* Each slide adds a new concrete detail. Never restate what appeared in a previous slide.

* Prioritize numbers, names, dates, direct quotes, charges, rulings, dollar amounts, and locations over generic summaries.

STYLE

Write like a political news outlet. Direct, confident, factual, conversational. Never describe

the source, the slides, or the writing itself. Do not narrate the structure of the carousel.

BANNED PHRASES: "the argument is," "the claim is," "the warning is," "the headline says," "the

article states," "the speaker says," "the post says," "according to the post," "this matters

because," "the carousel," "the first slide," "opens with," "this slide."

QUOTES

For text2 and text3: pull verbatim quotes from the transcript first. Do not invent, paraphrase as a quote, or attribute anything not said verbatim. Each slide should include at least one direct quote when available.

FORMATTING

Single continuous paragraph per field – no line breaks. No em dashes, emojis, or hashtags. Straight double quotes only. Collapse all whitespace to single spaces. No markdown or commentary outside JSON.

QUALITY CHECK before returning: quote is under 120 chars and specific, text1 under 150 chars, text2 and text3 are 450–650 chars with verbatim quotes, no banned phrases, no repeated facts across slides, valid JSON with straight double quotes.

What you send it:**TRANSCRIPT:**

[paste transcript, if you have one]

ORIGINAL SOURCE TEXT:

[original caption or article text]

ADDITIONAL CONTEXT:

[anything else relevant]

Featured person: [Speaker Name, if known]

Use this label for "name" when possible: [account username or topic label]

What comes back: JSON like:

```
{
  "name": "username_or_topic",
  "quote": "The one big line for slide 1's giant text",
  "text1": "Opening headline slide copy...",
  "text2": "Meatiest quote-heavy slide...",
  "text3": "Context/stakes slide..."
}
```

Drop `name` / `quote` / `text1` / `text2` / `text3` into your slide template (Canva, Figma, whatever you use to make the actual images).

Batch version: to do several posts in one pass, repeat the row block above for each post (label them `ROW 1` , `ROW 2` , etc. with a `row_number` field) and ask for a JSON **array** of objects instead of one object. Same rules apply.

4. "Generic" slide copy that hides the original source and adds outside research

Use this when: you want an informative post on a topic **without** crediting or referencing the original clip/speaker/article it came from — the app calls this "Make generic."

System / Instructions:

You are creating a standalone, source-agnostic informative carousel post.

CRITICAL: This post must NOT mention, credit, quote, or attribute anything to the original speaker or the source of the content below. Do not name the speaker. Do not reference the clip, interview, speech, or original post in any way.

Instead: identify the underlying topic or main person/subject the content is ABOUT, and write the post as if it is original research on that topic.

Mandatory extended research step before writing:

- * Identify the core topic or main person of interest from the content below.
- * Search online extensively for additional facts, data, dates, numbers, context, and recent developments on this topic.
- * Pull in verified statistics, timelines, key figures, and relevant background.
- * Prefer primary sources, Reuters, AP, government records, court documents, and reputable outlets.
- * Do not add unverified claims. If context cannot be verified, stay close to the supplied content.
- * Never cite sources in the output. Use research only to improve accuracy and depth.

Return a JSON object with: name, text1, text2, text3, generated_caption
[Then apply the same FIELDS / STYLE / QUOTES / FORMATTING rules as prompt #3 above to text1/text2/text3, plus:]

Caption rules: write a neutral, third-person informative caption under 1300 characters using exactly two simple paragraphs. Never write in first person. The first paragraph (250 chars or fewer) must include all required hashtags plus 3–5 relevant hashtags total, worked into the prose. The second paragraph adds context using verified facts, dates, and numbers, without referring to any transcript, clip, speech, interview, or video. Do NOT include any call to action asking readers to comment or DM for a link.

Quality check before final output:

- * No reference to the original speaker anywhere
- * No reference to a clip, transcript, speech, interview, or video
- * Reads as original research on the topic, not a summary of someone's content
- * No call-to-action about commenting, DMing, or retrieving a link

* Character limits respected; no hashtags/em dashes/smart quotes/markdown/newlines in slide fields

What you send it: the same transcript/caption/context block as prompt #3, plus Required hashtags to include in the caption: [hashtags] if you have any.

What comes back: the same JSON shape as #3, plus a ready-to-post generated_caption — but scrubbed of any reference to where the content originally came from, framed instead as independent reporting on the topic.

5. Read the text out of a screenshot or image post (OCR)

Use this when: you have a photo/carousel post (a screenshot of a tweet, article, or text graphic) and need the words in it as plain text before you can write a caption.

Prompt (attach the image(s) to the message):

Extract all readable text from these images. Return plain text only, in reading order. No labels or commentary.

What comes back: the raw text from the image(s), reading order preserved. Feed that text into prompt #1 or #3 above as your "original caption" / "context" source to generate the actual caption or slides.

6. Break a long article into 10 "most clickable" topics

Use this when: you have a full article (e.g. a Substack post) and want to find the most promotable angle before writing social copy.

System / Instructions:

You are preparing a reusable topic breakdown for [your brand/account name].

Read the full article all the way through and identify the 10 most salacious, clickbait-worthy, interesting topics a reader would care about. Do not just copy the first few nouns or phrases from the opening lines. Look for conflict, scandal, stakes, named people, named events, named policies, surprising claims, sharp contrasts, legal fights, campaign weaknesses, controversies, money, corruption, rights, power, and anything else that would genuinely make someone want to click. Prefer proper names, named events, named institutions, named offices, named policies, accusations, fights, rulings, scandals, and concrete controversies over abstract summaries.

Return EXACTLY 10 topic strings in rank order from most interesting/clickable to least. Each string must be 1 to 5 words. Use concrete article topics, not vague labels.

Good examples: "Zohran Mamdani", "Project 2025", "California governor race", "abortion rights", "Supreme Court ruling", "ICE raids", "union vote", "candidate flip-flop", "donor money", "ethics probe".
Bad examples: "emergencies", "political evolution", "cognitive biases", "article overview", "politics", "news", "voter information".

Return valid JSON: an array of 10 strings. No duplicates, no numbering, no markdown, no commentary outside JSON.

What you send it: Article:\n\n[paste full article text]

What comes back: a ranked JSON array of 10 short topic labels — pick the strongest one and use it as the "focus topic" in prompt #7.

7. Build a 6-slide carousel promoting an article, focused on one topic

Use this when: you've picked a focus topic (from #6, or your own judgment) and want a carousel that teases the full article on that angle.

Instructions:

Return ONLY valid JSON as an object (or array if doing several at once). No markdown, no commentary outside JSON.

Create a 6-slide Instagram carousel for [your brand] promoting an article.

Use plain language, no hashtags, no citations, no markdown, and no newline characters inside values.

Each slide should be self-contained and specific.

Set the "name" field to "[your account/brand label]".

text1 is the strongest opening slide under 350 characters.

text2, text3, text4, and text5 are semi-longer explainer slides, usually 500 to 800 characters each.

text6 is the closing slide under 500 characters. It should point people to the full article

without adding a URL.

Every text2–text5 slide must include at least one concrete piece of data from the article:

a

date, number, office, jurisdiction, name, quote, poll, vote margin, dollar amount, legal status, or other specific fact.

Do not write generic summary slides. Pull details directly from the article and distribute them across the six slides.

Focus the carousel on the selected topic. Use any extra context only as direction, not as

a

source of new facts.

On the final slide, say the full article covers this topic and more, and name at least two other article topics when possible.

No em dashes, emojis, hashtags, paragraph breaks, or newline characters inside text fields.

No speculation or invented framing. Never repeat the same fact, quote, setup, accusation, or

disclaimer across slides.

Article URL: [url]

Focus topic: [the topic you picked]

Article topics: [comma-separated list from prompt #6, optional]

Extra context from user: [any angle you want emphasized, optional]

Article:

[paste full article text]

What comes back: JSON with name, text1, text2, text3, text4, text5, text6 — six slides of carousel copy that tease the article without giving it all away.

8. Write the Instagram caption to go with a finished article-promo carousel

Use this when: you've already finalized the 6 slides from #7 and now need the caption that goes underneath the post.

System / Instructions:

You are writing an Instagram caption that promotes an article after the slide copy is finalized. Use the finalized slides as the primary guide for the caption's angle and summary.

Use the article only to verify facts and add one or two concrete details. Write in third person. Do not use I, me, my, we, us, our, or ours outside of a short direct quote from the

source. Write exactly two short paragraphs before the required CTA/footer. The first paragraph should summarize the main point clearly and specifically. The second paragraph should add concrete context and make clear the full article covers this topic and more. No hashtags, no emojis, no bullet points, no markdown, no links in the body. End with the exact

required CTA/footer provided.

What you send it:

Focus topic: [topic]
Article topics: [list, optional]
Extra context: [optional]

Finalized slides:

TEXT1: [...]
TEXT2: [...]
TEXT3: [...]
TEXT4: [...]
TEXT5: [...]
TEXT6: [...]

Article:
[paste article]

Required CTA/footer:

Comment LINK (on instagram) and we will DM you the link to [article URL]

Help this information get to more voters. 🇺🇸 A well-informed electorate is a prerequisite to Democracy.—Thomas Jefferson

What comes back: a two-paragraph caption ending in your exact CTA/footer, ready to paste under the post.

9. Research and write a full long-form "voter guide" style article about a race or topic

Use this when: you want an entire researched article (1,800–2,500 words) comparing candidates/positions on a race — this needs a model with live web search.

Instructions (send as one message, model needs web browsing enabled):

You are generating a "living guide" article for a series called [Your Series Name]. Each article covers one race/topic or, when appropriate, a small set of clearly related ones. Your job is to research using web search and produce a complete article ready to publish.

INPUT:

- Subject(s)/candidates: [names]
- Donation URL (optional): [url or leave blank]

STEP 1: RESOLVE THE SCOPE

Before writing anything, use web search to figure out: what office/topic this is about, in what jurisdiction and cycle; which subjects belong together vs. are actually separate races; the exact relevant dates; today's date (for a "last updated" stamp). If you cannot confidently resolve a clear scope, stop and report back what's ambiguous instead of guessing.

STEP 2: WRITE THE ARTICLE

Research using web search. Pull from a mix of mainstream news, local journalism, neutral reference sources (Ballotpedia, Wikipedia), and prediction markets if available. Cite specific sources for every factual claim, especially numbers, quotes, and polling data. If it's one race, compare directly. If multiple, organize by race/topic and cover all of them you resolved. Identify the 3–5 issues that most define the difference between the subjects/races. Do not pad with generic categories – let real fault lines and any genuine controversy or viral moment show, with clear sourcing, explained without sensationalizing. Write in the voice of The Atlantic: confident, accessible, narrative-driven, not breathless or partisan. Treat the reader as a smart adult who hasn't been following closely. Feel informative first, not persuasive. If a donation URL is provided, do not let it shape your analysis, tone, issue selection, or framing – but do include a strong, clearly-labeled donation call to action near the top if one is present. No em dashes anywhere.

Use this exact structure and order:

- TITLE: "[Names/subjects] | [Race/Topic Name] | [Date]"
- Date stamp: "Last updated: [today's date]"
- Opening hook: 2–3 short paragraphs on why this matters, ending with the relevant

date(s).

- "Who Are These Candidates?" (or equivalent) section: one paragraph per subject – background, experience, and the case each one makes for themselves.
- "The [N] Issues That Define This Race" section: pick the right number, explain where each side stands with direct quotes where possible.
- "The Money: Who's Funding What" section: funding breakdown, major spending, notable donors, unusual dynamics (foreign money, dark money, etc.).
- "Where Things Stand Right Now" section: most recent polling/data and a sober assessment of momentum, noting margins of error / uncertainty.
- "What You Can Do Right Now" section, split into: "If you live in [area]" (practical local action links/steps), "If you're watching from elsewhere," "If you want to go deeper" (sources, campaign sites, local journalism).
- "What People Are Getting Wrong" section: 3–5 pieces of misinformation, each briefly corrected, fair to all sides.
- "Read More" section: 5–8 sources, each with publication name bolded, title in quotes, a one-sentence description, and the full URL on its own line.
- Closing line in italics inviting corrections/additions in the comments.
- Disclaimer in italics noting this was researched and written with AI assistance, reviewed by a human editor, and is a living document that gets corrected based on feedback.

After the article, output a "Tags" block with five tags optimized for search/discovery.

CONSTRAINTS: cite every factual claim to a specific source. Stay scrupulously neutral – save

critical assessment for the "getting wrong" section, balanced across all sides. Treat controversies as reported facts and competing interpretations unless sourcing clearly proves

otherwise. Note discrepancies across sources rather than picking one. Never invent quotes, numbers, or endorsements – omit anything you can't find. Keep the total length 1,800–2,500 words. No em dashes.

STEP 3: At the very top of your output, before the article, include one line: "Resolved scope: [what you determined]" so a human editor can verify you covered the right thing. Then

output the article, then the Tags block.

What comes back: a full researched, sourced article ready for a human editor to skim and publish, plus a one-line "here's what I assumed you meant" check and 5 discovery tags.

10. Turn a finished long-form article into a teaser carousel

Use this when: the article from #9 exists and you want a punchy 3-slide teaser to promote it on Instagram.

Instructions:

Return ONLY valid JSON as an object with: name, text1, text2, text3, generated_caption.
No markdown, no commentary outside JSON. Plain straight double quotes only.

name = "[your account/brand label]"

text1 = strongest opening carousel slide under 350 chars. Lead with the most emotionally compelling verified quote, allegation, consequence, contradiction, or fact. Write it like a

viral news headline – prioritize emotion, conflict, consequences, and curiosity over explanation. It must make the viewer urgently want to read slide 2.

text2 = under 900 chars. "Here's what the full article gets into" – summarize the central conflict, money, stakes, and defining contrast. Make clear this is drawn from a larger piece.

text3 = under 900 chars. The key date(s) and latest data/polling with source if mentioned, and

any prediction-market odds. End with: "Comment LINK and I'll DM you the full article."

generated_caption = under 900 chars, no hashtags, no footer (you'll add your own footer after).

A concise, informative caption summarizing the article's key findings, noting it's a breakdown

piece that gets updated based on comments, and briefly mentioning any major controversy if central.

Style priority: write like a viral political news account making Instagram carousel slides

–

natural, conversational, punchy, emotionally-charged but factual. Use direct quotes and specific numbers/names whenever they strengthen it. Avoid generic summaries, filler, robotic

transitions, and over-explaining. No hashtags in slide text or caption. No em dashes.

Article to base the carousel on:

[paste article]

Article URL (for reference only):

[url]

What comes back: a JSON object with name, text1, text2, text3, generated_caption — a tight 3-slide teaser plus caption for the article.

11. Research a race from scratch and produce a full 6-slide carousel + caption in one shot

Use this when: you don't need a full article — just want the researched carousel post directly, in one pass (needs web search).

Instructions:

Return **ONLY** valid JSON – a single object with no markdown and no commentary outside the JSON.

Use web search to research this race before writing. Pull from Ballotpedia, local news, major outlets, and campaign sites. Cite facts and figures only if you can verify them.

Race: [race/topic description]

Today's date: [date]

Output keys: name, quote, text1, text2, text3, text4, text5, text6, generated_caption, source_url

Rules: no markdown, no em dashes, no paragraph breaks or newlines inside any field (each field is one unbroken paragraph), no hashtags anywhere, straight double quotes only, no speculation – only verified sourced facts.

name – short label, e.g. "Colorado Senate", "NY-21 Congressional", "Georgia Governor". Under 40 chars. This is the headline/speaker label shown on the post.

quote – the single sharpest tension or decision voters face. Not a slogan – specific to this

race and moment. Under 200 chars. No attribution, no nested quotes.

text1 – introduces the race, reinforces the tension from the quote, names both/all candidates,

sets the stakes. Under 350 chars.

text2, text3, text4, text5 – each covers one major issue voters are weighing. These are the meatiest slides. Start each with the issue name (e.g. "Abortion:", "Immigration:", "Economy:").

Go deep – show HOW the sides disagree with specifics. Include at least one hard number, dollar

figure, vote record, polling stat, or direct quote – search for real figures. Up to 800 chars

each, one paragraph.

text6 – logistics: exact date, registration/ballot deadline if known, and where to look up polling place or registration status. Under 400 chars.

generated_caption – concise caption naming the candidates/subjects and race, mentioning this is

a breakdown carousel, noting one or two key contrasts. Under 900 chars, no footer, no

hashtags.

source_url — the single best URL for someone wanting to understand this race (prefer Ballotpedia, a local news overview, or a major outlet's dedicated race page). Raw URL only.

What comes back: one complete JSON object — a fully-researched 6-slide carousel with sources, ready to build into slide images, plus the caption to post with it.

12. Sort a batch of Instagram comments into themes

Use this when: you're moderating/monitoring comments on a post (e.g. checking what people think you got wrong or missed) and want them grouped instead of read one by one.

System / Instructions:

Review these Instagram comments and classify every qualifying comment into one or more of these headings: What About, Missing, Biased, Wrong, Controversies.

Phrases like "what about," "you missed," and "why didn't you mention" are strong signals, but

use judgment and don't require exact wording. Ignore comments that are only asking for a link.

Use "Controversies" for comments asking about scandals, allegations, investigations, corruption, lawsuits, ethics issues, or other controversies around the person.

Do not rewrite, shorten, or paraphrase the comments. Choose the exact comment numbers from the

list. Return all qualifying comments, not just a sample. A comment may appear under more than

one heading if needed.

Return JSON only in this format:

```
{"groups": {"What About": [1, 4], "Missing": [2], "Biased": [3], "Wrong": [5, 6], "Controversies": [7]}}
```

Use empty arrays for headings with no matches. Return all five headings every time.

What you send it:

Comments to review:

1. @user1: [comment text]
2. @user2: [comment text]
3. (unknown user): [comment text]
- ...

What comes back: a JSON map of which comment numbers fall under each theme — use it to quickly answer "what are people saying we got wrong/missed" without reading every comment individually.

Bonus: Suggesting a visual/image to pair with a post

The app itself doesn't generate images — it auto-downloads whatever Instagram media (photo/video/thumbnail) already exists for a post. If you're building a post from scratch (e.g. from an article, with no existing Instagram photo/video), use this to get direction on what to actually put in the image:

Based on this caption and topic, suggest 3 concrete visual directions for the accompanying Instagram image or slide background. For each: describe exactly what should be in the shot or graphic (who/what, framing, mood), and note whether it should be a real news photo you'd need to source, a text-on-background quote card, or a simple graphic/chart. Keep each suggestion to 2–3 sentences. No stock-photo clichés (handshakes, gavels, generic crowds) unless genuinely the most accurate option.

Caption/topic:

[paste caption or topic]

What comes back: 3 concrete image/visual concepts to search for, screenshot, or design — since ChatGPT/Claude text prompts can't fetch real Instagram photos for you the way the app's Apify integration does.

Quick reference: which prompt for which situation

You have...	Use prompt
A reel transcript or article, want a caption	#1
Just an existing Instagram caption, want headlines + a new caption fast	#2
Want carousel/slide text for one post	#3
Want carousel text that hides the original source and adds outside research	#4
A screenshot/text-image post, need the words out of it	#5
A long article, need to find the best angle	#6 → #7 → #8
Want a full researched long-form article	#9
Have that article, want a teaser carousel	#10
Want a researched race carousel with no separate article	#11
A pile of comments to make sense of	#12
No existing photo/video to pair with the post	Bonus

Brand-specific bits to swap out if this is going to someone building a different account: the footer tagline (`Help this information get to more voters...`), the account/series name (`Vote In Or Out`), the hashtag bans (`#Trump`, `#ICE`, `#DonaldTrump...`), and the "third person, no first-person voice" rule if that's not the house style you want.
